11.2: Getting Ready- Questions to Ask Yourself About Your Research Essay

If you are coming to this chapter after working through some of the writing exercises in Part Two, “Exercises in the Process of Research,” then you are ready to dive into your research essay. By this point, you probably have done some combination of the following things:

• Thought about different kinds of evidence to support your research;
• Been to the library and the internet to gather evidence;
• Developed an annotated bibliography for your evidence;
• Written and revised a working thesis for your research;
• Critically analyzed and written about key pieces of your evidence;
• Considered the reasons for disagreeing and questioning the premise of your working thesis; and
• Categorized and evaluated your evidence.

In other words, you already have been working on your research essay through the process of research writing.

But before diving into writing a research essay, you need to take a moment to ask yourself, your colleagues, and your teacher some important questions about the nature of your project.

• What is the specific assignment?

It is crucial to consider the teacher’s directions and assignment for your research essay. The teacher’s specific directions will in large part determine what you are required to do to successfully complete your essay, just as they did with the exercises you completed in part two of this book.

If you have been given the option to choose your own research topic, the assignment for the research essay itself might
be open-ended. For example:

Example 1:

Write a research essay about the working thesis that you have been working on with the previous writing assignments. Your essay should be about ten pages long, it should include ample evidence to support your point, and it should follow MLA style.

Some research writing assignments are more specific than this, of course. For example, here is a research writing assignment for a poetry class:

Example 2:

Write a seven to ten page research essay about one of the poets discussed in the last five chapters of our textbook and his or her poems. Besides your analysis and interpretation of the poems, be sure to cite scholarly research that supports your points. You should also include research on the cultural and historic contexts the poet was working within. Be sure to use MLA documentation style throughout your essay.

Obviously, you probably wouldn’t be able to write a research project about the problems of advertising prescription drugs on television in a History class that focused on the American Revolution.

What is the main purpose of your research essay?

Has the goal of your essay been to answer specific questions based on assigned reading material and your research? Or has the purpose of your research been more open-ended and abstract, perhaps to learn more about issues and topics to share with a wider audience? In other words, is your research essay supposed to answer questions that indicate that you have learned about a set and defined subject matter (usually a subject matter which your teacher already more or less understands), or is your essay supposed to discover and discuss an issue that is potentially unknown to your audience, including your teacher.

The “demonstrating knowledge about a defined subject matter” purpose for research is quite common in academic writing. For example, a political science professor might ask students to write a research project about the Bill of Rights in order to help her students learn about the Bill of Rights and to demonstrate an understanding of these important amendments to the U.S. Constitution. But presumably, the professor already knows a fair amount the Bill of Rights, which means she is probably more concerned with finding out if you can demonstrate that you have learned and have formed an opinion about the Bill of Rights based on your research and study.

“Discovering and discussing an issue that is potentially unknown to your audience” is also a very common assignment, particularly in composition courses. As the examples included throughout The Process of Research Writing suggest, the subject matter for research essays that are designed to inform your audience about something new is almost unlimited.

Even if all of your classmates have been researching a similar research idea, chances are your particular take on that idea has gone in a different direction. For example, you and some of your classmates might have begun your research...
by studying the effect on children of violence on television, either because that was a topic assigned by the teacher or because you simply shared an interest in the general topic. But as you have focused and refined this initially broad topic, you and your classmates will inevitably go into different directions, perhaps focusing on different genres (violence in cartoons versus live-action shows), on different age groups (the effect of violent television on pre-schoolers versus the effect on teen-agers), or on different conclusions about the effect of television violence in the first place (it is harmful versus there is no real effect).

• Who is the main audience for your research writing project?

Besides your teacher and your classmates, who are you trying to reach with your research? Who are you trying to convince as a result of the research you have done? What do you think is fair to assume that this audience knows or doesn’t know about the topic of your research project? Purpose and audience are obviously closely related because the reason for writing something has a lot to do with who you are writing it for, and who you are writing something for certainly has a lot to do with your purposes in writing in the first place.

In composition classes, it is usually presumed that your audience includes your teacher and your classmates. After all, one of the most important reasons you are working on this research project in the first place is to meet the requirements of this class, and your teacher and your classmates have been with you as an audience every step of the way.

Contemplating an audience beyond your peers and teachers can sometimes be difficult, but if you have worked through the exercises in Part Two of The Process of Research Writing, you probably have at least some sense of an audience beyond the confines of your class. For example, one of the purposes “Critique Exercise” in Chapter 7 is to explain to your readers why they might be interested in reading the text that you are critiquing. The goal of the “Antithesis Exercise” in Chapter 8 is to consider the position of those who would disagree with the position you are taking. So directly and indirectly, you’ve probably been thinking about your readers for a while now.

Still, it might be useful for you to try to be even more specific about your audience as you begin your research essay. Do you know any “real people” (friends, neighbors, relatives, etc.) who might be an ideal reader for your research essay? Can you at least imagine what an ideal reader might want to get out of reading your research essay?

I’m not trying to suggest that you ought to ignore your teacher and your classmates as your primary audience. But research essays, like most forms of writing, are strongest when they are intended for a more specific audience, either someone the writer knows or someone the writer can imagine. Teachers and classmates are certainly part of this audience, but trying to reach an audience of potential readers beyond the classroom and the assignment will make for a stronger essay.

• What sort of “voice” or “authority” do you think is appropriate for your research project?

Do you want to take on a personal and more casual tone in your writing, or do you want to present a less personal and less casual tone? Do you want to use first person, the “I” pronoun, or do you want to avoid it?

My students are often surprised to learn that it is perfectly acceptable in many types of research and academic writing for writers to use the first person pronoun, “I.” It is the tone I’ve taken with this textbook, and it is an approach that is very common in many fields, particularly those that tend to be grouped under the term “the humanities.

For example, consider this paragraph from Kelly Ritter’s essay “The Economics of Authorship: Online Paper Mills,
Student Writers, and First-Year Composition,” which appeared in June 2005 issue of one of the leading journals in the field of composition and rhetoric, College Composition and Communication:

Example \(\PageIndex{3}\)):

When considering whether, when, and how often to purchase an academic paper from an online paper-mill site, first-year composition students therefore work with two factors that I wish to investigate here in pursuit of answering the questions posed above: the negligible desire to do one’s own writing, or to be an author, with all that entails in this era of faceless authorship vis-à-vis the Internet; and the ever-shifting concept of “integrity,” or responsibility when purchasing work, particularly in the anonymous arena of online consumerism. (603, emphasis added)

Throughout her thoughtful and well-researched essay, Ritter uses first person pronouns (“I” and “my,” for example) when it is appropriate: “I think,” “I believe,” “my experiences,” etc.

This sort of use of the personal pronoun is not limited to publications in English studies. This example comes from the journal Law and Society Review (Volume 39, Issue 2, 2005), which is an interdisciplinary journal concerned with the connections between society and the law. The article is titled “Preparing to Be Colonized: Land Tenure and Legal Strategy in Nineteenth-Century Hawaii” and it was written by law professor Stuart Banner:

Example \(\PageIndex{4}\)):

The story of Hawaii complicates the conventional account of colonial land tenure reform. Why did the land tenure reform movement of the late nineteenth and early twentieth centuries receive its earliest implementation in, of all places, Hawaii? Why did the Hawaiians do this to themselves? What did they hope to gain from it? This article attempts to answer these questions. At the end, I briefly suggest why the answers may shed some light on the process of colonization in other times and places, and thus why the answers may be of interest to people who are not historians of Hawaii. (275, emphasis added)

Banner uses both “I” and “my” throughout the article, again when it’s appropriate.

Even this cursory examination of the sort of writing academic writers publish in scholarly journals will demonstrate my point: academic journals routinely publish articles that make use of the first person pronoun. Writers in academic fields that tend to be called “the sciences” (chemistry, biology, physics, and so forth, but also more “soft” sciences like sociology or psychology) are more likely to avoid the personal pronoun or to refer to themselves as “the researcher,” “the author,” or something similar. But even in these fields, “I” does frequently appear.

The point is this: using “I” is not inherently wrong for your research essay or for any other type of academic essay. However, you need to be aware of your choice of first person versus third person and your role as a writer in your research project.

Generally speaking, the use of the first person “I” pronoun creates a greater closeness and informality in your text, which can create a greater sense of intimacy between the writer and the reader. This is the main reason I’ve used “I” in The Process of Research Writing: using the first person pronoun in a textbook like this lessens the distance between us (you as student/reader and me as writer), and I think it makes for easier reading of this material.
If you do decide to use a first person voice in your essay, make sure that the focus stays on your research and does not shift to you the writer. When teachers say “don’t use I,” what they are really cautioning against is the overuse of the word “I” such that the focus of the essay shifts from the research to “you” the writer. While mixing autobiography and research writing can be interesting (as I will touch on in the next chapter on alternatives to the research essay), it is not the approach you want to take in a traditional academic research essay.

The third person pronoun (and avoidance of the use of “I”) tends to have the opposite effect of the first person pronoun: it creates a sense of distance between writer and reader, and it lends a greater formality to the text. This can be useful in research writing because it tends to emphasize research and evidence in order to persuade an audience.

(I should note that much of this textbook is presented in what is called second person voice, using the “you” pronoun. Second person is very effective for writing instructions, but generally speaking, I would discourage you from taking this approach in your research project.)

In other words, “first person” and “third person” are both potentially acceptable choices, depending on the assignment, the main purpose of your assignment, and the audience you are trying to reach. Just be sure to consistent—don’t switch between third person and first person in the same essay.

- **What is your working thesis and how has it changed and evolved up to this point?**

If you’ve worked through some of the exercises in part two of *The Process of Research Writing*, you already know how important it is to have an evolving working thesis. If you haven’t read this part of the textbook, you might want to do so before getting too far along with your research project. Chapter Five, “The Working Thesis Exercise,” is an especially important chapter to read and review.

Remember: a **working** thesis is one that changes and evolves as you write and research. It is perfectly acceptable to change your thesis in the writing process based on your research.

Exercise 10.1

Working alone or in small groups, answer these questions about your research essay before you begin writing it:

- What is the specific research writing assignment? Do you have written instructions from the teacher for this assignment? Are there any details regarding page length, arrangement, or the amount of support evidence that you need to address? In your own words, restate the assignment for the research essay.
- What is the purpose of the research writing assignment? Is the main purpose of your research essay to address specific questions, to provide new information to your audience, or some combination of the two?
- Who is the audience for your research writing assignment? Besides your teacher and classmates, who else might be interested in reading your research essay?
- What sort of voice are you going to use in your research essay? Besides your teacher and classmates, who else might be interested in reading your research essay?
- What is your working thesis? Think back to the ways you began developing your working thesis in the exercises in part two of *The Process of Research Writing*. In what ways has your working thesis changed?

If you are working with a small group of classmates, do each of you agree with the basic answers to these questions? Do the answers to these questions spark other questions that you have and need to have answered by your classmates?
and your teacher before you begin your research writing project?

Once you have some working answers to these basic questions, it’s time to start thinking about actually writing the research essay itself. For most research essay projects, you will have to consider at least most of these components in the process:

• The Formal Outline
• The Introduction
• Background Information
• Evidence to Support Your Points
• Antithetical Arguments and Answers
• The Conclusion
• Works Cited or Reference Information

The rest of this chapter explains these parts of the research essay and it concludes with an example that brings these elements together.
